

PROPERTY24 SQL MINI PROJECT – TASK OVERVIEW

Project Background

You have been provided with a large property dataset representing residential properties across all nine provinces of South Africa. The dataset simulates a real estate platform similar to Property24 and contains approximately 100,000 records.

Your Task

Your task is to use SQL to explore, filter, and analyse the data using SELECT queries. You are NOT required to modify the data or insert new records.

What You Must Do

- Write SQL queries to answer each question provided in the question document.
- Use SELECT, WHERE, ORDER BY, and TOP appropriately.
- Ensure your queries return accurate and readable results.

Rules

- Do not change the table structure.
- Do not delete or update any records.
- Only use read-only queries (SELECT).

What Is Being Assessed

- Correct use of SQL syntax.
- Proper filtering and sorting of data.
- Ability to interpret business-style questions into SQL queries.

Deliverables

Submit a document or SQL file containing all your queries, clearly numbered to match the question sheet.

Estimated Difficulty

Beginner to Intermediate SQL level.
